Section 1 Phase 1 CAP/ER and Phase 2 CAP/ER

Consent Decree language, pages 82-83: "Each Quarterly Progress Report shall contain... A summary of compliance with and activities related to implementation of the Phase 1 CAP/ER and Phase 2 CAP/ER, including the status of construction projects in comparison to the schedules that have been established pursuant to the Consent Decree for those projects; and schedule deadlines and milestones achieved during Calendar Quarter and expected during next Calendar Quarter."

KUB began developing a Corrective Action Plan/Engineering Report (CAP/ER) in January 2004, following the completion of the Phase I Sanitary Sewer Overflow Evaluation Report (SSOER) required by the Agreed Order with the Tennessee Department of Environment and Conservation (TDEC) and, subsequently, the Consent Decree. The objective of the Phase I CAP/ER is to identify facility improvements needed to address the conditions causing SSOs occurring in the collection system during the period of 2001–2004 with the goal of eliminating the SSO locations on the Long-Term List and to support future growth needs. KUB submitted the Phase 1 CAP/ER to EPA on October 28, 2005. Comments were received from EPA on February 23, 2006. Per EPA's letter, KUB submitted a 30-day response to EPA's comments on March 27, 2006. The Revised Phase 1 CAP/ER was submitted to EPA on May 22, 2006, and subsequently approved by EPA on June 30, 2006. All work necessary to meet the objectives of the Phase 1 CAP/ER was completed by the June 30, 2013 deadline. The Phase 2 CAP/ER was submitted to EPA on September 9, 2009, and approved on March 22, 2010. All work necessary to meet the objectives of the Phase 2 CAP/ER was completed by March 31, 2014, prior to the June 30, 2016 deadline.

The Process Controls Program (PCP) was initiated 18 times during this reporting period. No Diversion events occurred.

Section 4 Capacity Assurance Program

Consent Decree language, pages 82-83: "Each Quarterly Progress Report shall contain... A summary of the implementation of the Capacity Assurance Program for that Calendar Quarter, including the number of, and anticipated flow from, sewer connections that have been authorized, by Sewerbasin, a description of the projects that have been authorized and the number of credits earned and banked by KUB that will be expended for those projects, by Sewerbasin, and any exceptions granted for connections for essential services."

The Capacity Assurance Program (CAP) was submitted to EPA for review on February 8, 2006. EPA reviewed and approved the program on April 7, 2006. KUB started reviewing building permits based on the approved CAP on June 6, 2006, which was within the 60-day timeframe for implementing the program after receiving EPA approval.

To review building permits more efficiently using the CAP criteria agreed on with the EPA, KUB worked with a consultant, Camp, Dresser, & McKee, to develop an Information Management System (IMS). The IMS assists KUB in managing the CAP program by determining the amount of wastewater each proposed building would add to KUB's wastewater system based on its location. The IMS also helps track rehabilitation credits that KUB earns through its CAP/ER and Management, Operations, and Maintenance (MOM) programs.

Appendix A includes a list of capital projects that KUB performed to gain rehabilitation credit in its sewer system. As stated in the Consent Decree, the list of authorized sewer connections was maintained and updated as necessary until full implementation of the CAP as approved by EPA. Therefore, the list will no longer be included as part of this quarterly report.

There were no exceptions granted for connections for essential services during this reporting period.

Section 5 Transfers of Ownership

Consent Decree language, pages 82-83: "Each Quarterly Progress Report shall contain... Identification of any transfer of an ownership interest, operation, management, or other control of the Treatment Works, or any portion thereof."

There has been no transfer of ownership interest, operation, management, or other control of the Treatment Works, or any portion thereof, during this reporting period as defined by Section III, Part C of the Consent Decree.

Section 6 Compliance and Non-Compliance With the Consent Decree

Consent Decree language, pages 82-83: "Each Quarterly Progress Report shall contain...A description of the status of compliance or non-compliance with the requirements of this Decree and, if applicable, the reasons for non-compliance, including a list of all violations that are subject to stipulated penalties under Section X of this Consent Decree."

6.1 Submission of Deliverables

To date, KUB has submitted all deliverables in accordance with the schedule set forth in the Consent Decree. The following sections detail all activity related to deliverables that occurred during the past quarter. Also noted are the dates each submittal was available for public comment in the Public Document Repository (PDR), when the deliverable was submitted to EPA, when EPA responded with comments, when KUB responded to those comments, and when EPA approval was received.

On January 28, 2016, KUB submitted to EPA and placed in the PDR the Quarterly Progress Report for the fourth quarter 2015. This deliverable was not subject to the Public Review Requirement of Section VI.A.2, but was available for public comment from January 28, 2016, until February 17, 2016. No comments were received during that period.

Section 8 Water Quality Monitoring Data

Consent Decree language, pages 82-83: "Each Quarterly Progress Report shall contain... The water quality monitoring data and other information required pursuant to Section VII.D.1.(e).(v)."

8.1 Sampling Conducted and Results

Appendix D lists all sampling that was conducted during this reporting period and the results thereof. KUB investigates the source of any high *E. coli* counts that reoccur in the course of routine or investigative monitoring.

First Creek

Any bacteriological *E. coli* results above the water quality standard of 941cfu/100 ml for this Creek occurred during wet weather conditions when storm runoff can bring surface contamination to the stream. Monitoring results obtained were not consistently high throughout the quarter. Bacteriological counts obtained during some months in the quarter were not above the standard. No investigation is needed. (Routine Water Quality Monitoring Report – Appendix D).

Second Creek

Any bacteriological *E. coli* results above the water quality standard of 941cfu/100 ml for this Creek occurred during wet weather conditions when storm runoff can bring surface contamination to the stream. Monitoring results obtained were not consistently high throughout the quarter. Bacteriological counts obtained during some months in the quarter were not above the standard. No investigation is needed. (Routine Water Quality Monitoring Report – Appendix D).

Third Creek

All bacteriological *E. coli* results were below the water quality standard of 941cfu/100 ml for this Creek this quarter (Routine Water Quality Monitoring Report – Appendix D).

Fourth Creek

All bacteriological *E. coli* results were below the water quality standard of 941cfu/100 ml for this Creek this quarter (Routine Water Quality Monitoring Report – Appendix D).

Baker Creek

Any bacteriological *E. coli* results above the water quality standard of 941cfu/100 ml for this Creek occurred during wet weather conditions when storm runoff can bring surface contamination to the stream. Monitoring results obtained were not consistently high throughout the quarter. Bacteriological counts obtained during some months in the quarter were not above the standard. No investigation is needed. (Routine Water Quality Monitoring Report – Appendix D).

Goose Creek

All bacteriological *E. coli* results were below the water quality standard of 941cfu/100 ml for this Creek this quarter (Routine Water Quality Monitoring Report – Appendix D).

Loves Creek

All bacteriological *E. coli* results except one (980 cfu/100ml) were below the water quality standard of 941cfu/100 ml for this Creek this quarter (Routine Water Quality Monitoring Report – Appendix D). The one slightly elevated result occurred during wet weather conditions.

Williams Creek

All bacteriological *E. coli* results were below the water quality standard of 941cfu/100 ml for this Creek this quarter (Routine Water Quality Monitoring Report – Appendix D).

Spill Impact Reporting

There were three unpermitted discharges that occurred in dry weather conditions. See the Spill Impact Report in Appendix D for the monitoring results. Stream monitoring could not be safely conducted for the discharge that occurred on 1/29/16 due to the steep incline to the river near where the overflow had occurred. This overflow was caused by a crack in a gravity main and was small in volume (50 gallons). Most of the unrecovered volume went to soil saturation. The gravity main was repaired to prevent further concerns.

8.2 Projected Data Collection

During the second quarter of 2016, KUB will continue to monitor the 24 routine sampling locations in the sewer basins of eight area creeks. KUB will collect samples from the following locations during the second quarter of 2016:

Appendix E

Unpermitted Discharges Subject to Stipulated Penalties

First Quarter 2016 Unpermitted Discharge Data and Analysis

Appendix E lists all SSOs that occurred during 2016 that resulted in an unpermitted discharge along with its cause, volume, one- and three-day rainfall totals, and rainfall intensity.

The table below summarizes unpermitted discharges listed in Appendix E for this quarter that were impacted by factors that were difficult to control or events that had minimal impact on the environment due to their low volume.

Table 6. Unpermitted Discharge Data
